

Your money waits until the house is actually there.

Datum holds the money you put into a home in escrow on Avalanche, in shillings, and pays the builder one stage at a time, only when photos of the site pass four checks and a trustee signs. If the site goes quiet, your money comes back. You pay by M-Pesa, as always.

THE PROBLEM

We all know someone who paid and got nothing

Off-plan buyers pay a developer and pray. Kenyans abroad send money to a fundi and get photos on WhatsApp: whose plot, which year, nobody can tell. Both trust a stranger with money and get a promise back, and nobody can help afterwards.

VALUE PROPOSITION

Nothing moves until there is proof

Money in a smart contract the builder cannot touch. Each stage needs photos taken at the plot, taken recently, never sent before, and showing the stage claimed. A trustee, or the person whose money it is, countersigns. Two of three signatures release one stage's share. Thirty quiet days and anyone can call it stalled; unreleased money comes back pro rata.

1 · REAL PEOPLE

Sign in by M-Pesa number or email; get your own Avalanche address. Listers pay KES 200 and are verified in person by Datum staff.

2 · OR ASK US TO BUILD

Say what to build and your budget, pay a ten percent deposit. Staff propose a verified builder, a trustee and the stages. Both sign; the escrow deploys with the deposit inside.

3 · PHOTOS CHECKED

GPS, recency, a perceptual hash against every photo ever sent, a vision model on the stage. Then a trustee looks and signs.

4 · EVERY ACTION ON CHAIN

Account, deposit, agreement, photo, signature, release, refund: each hashed against the actor's own address. A trace you can hand to a lender.

IDEAL CUSTOMER

- **Kenyans abroad** building on their own plot: 300k to 3M over a few years to someone they cannot supervise. First.
- **Off-plan buyers** in Nairobi's satellite towns who want proof before each instalment.
- **Developers and companies** who lose sales to distrust. Escrow is their sales tool.
- **Trustees**: surveyors, valuers, advocates who already inspect sites.

BUSINESS MODEL

- **KES 200** onboarding fee by M-Pesa, charged today.
- **1 to 1.5%** of each stage released to the builder.
- **Verification visit**, a flat fee per listing, shared with the trustee.
- **Monthly plan** for developers with several projects.
- On a 3M build: 200 bob once, 30k to 45k over the build. Less than one flight home to check.

GO-TO-MARKET

- **Months 0 to 3**: ten pilot builds for the diaspora in Kiambu, Nyeri and Machakos; ten verified fundis, three surveyor trustees, zero escrow fee.
- **Months 3 to 9**: three developers in Kitengela, Ruiru and Athi River sell "your money is in escrow" and bring their buyers.
- **Month 9 on**: a licensed partner holds the shillings; SACCOs and lenders use the register for drawdowns; next counties.

CUSTOMER ACQUISITION

SEGMENT	WHERE	THE LINE
Diaspora owners	SACCOs, chamas, churches abroad	"The fundi is paid when the wall is up, not before"
Off-plan buyers	Developer show houses	"Ask if your money is in escrow"
Builders	NCA register, county associations	"Verified once, paid every stage"
Trustees	ISK surveyors, valuers	"A paid, permanent record of your sign-off"
Developers	KPDA, off-plan advertisers	"Escrow is your sales tool"

Every verified builder brings owners; every finished house brings the friend who was burned. Acquisition cost: one site visit and one WhatsApp message.

WHAT WE ARE LOOKING FOR

- A licensed trust or e-money partner to hold the shillings
- A production M-Pesa paybill
- Three developers and one diaspora SACCO to pilot
- Surveyors and valuers to act as paid trustees
