

Money for a home that does not exist yet, held until it does.

Datum holds buyers' and senders' money in escrow on Avalanche, in shillings, and releases it to the builder one stage at a time, against geotagged photographs that pass four checks and a trustee's signature. If the site goes quiet, the money comes back.

THE PROBLEM

You pay, and you pray

Off-plan buyers pay a developer and have no way back if the build stalls. Kenyans abroad send money to a fundi and get photos on WhatsApp: whose plot, which year, nobody can tell. Both are trusting a stranger with money and getting a promise back.

WHAT DATUM DOES

Proof before release

Money in by M-Pesa, held by a smart contract the builder cannot touch. Each stage needs photographs that pass four checks: taken at your plot, taken recently, never sent before, showing the stage claimed. A trustee countersigns. Two of three signatures release that stage's share and nothing more.

1 · Verified people

Every account is a proven number or email. Listers pay KES 200 and are verified in person by Datum staff before anything goes live.

2 · Money into escrow

Commit to a listing, pay in instalments by M-Pesa. Each confirmed payment becomes a claim in the contract.

3 · Photographs checked

GPS, recency, a perceptual hash against every photo ever submitted, and a vision model on the stage.

4 · Or refunded

Thirty quiet days and anyone can declare the project stalled. Unreleased money comes back pro rata.

Try it now: datum-roan.vercel.app

Scan, pick who you are, sign in with any number or email using code **246810**, and commit to a listing. Everything you do is written on chain against your own address.

Who it is for

SENDER

Building on your own plot from abroad

Sign in by email, add your M-Pesa number, pay a small fee, and every shilling waits for proof of work before it moves.

BUYER

Buying off-plan

Commit to a listed home, pay in instalments, and watch the register: what is held, what was released, and why.

DEVELOPER OR COMPANY

Building or raising

Post the build with milestones and photographs. Verified once, then paid stage by stage as a trustee signs. Buyers trust the process, so they pay.

Off-plan buyers in Kenya pay for homes that do not exist yet. The money goes into a developer's account, and if the build stalls there is no way to get it back. Datum holds those deposits in escrow and releases them only against construction that has been proven to exist.

1 – BUYERS PAY IN

Deposits arrive by M-Pesa and are held by a smart contract, denominated in shillings. The developer cannot touch them.

2 – THE SITE IS PHOTOGRAPHED

Each milestone needs geotagged photographs. Four checks run on every one: it was taken at the site, taken recently, never submitted before, and shows the stage claimed.

3 – TWO OF THREE SIGN

The evidence pipeline is one signature. A licensed surveyor, the person whose money it is, or the platform is the second. No single party, including us, can move money alone.

4 – OR EVERYONE IS REFUNDED

If the project goes quiet for 30 days, any buyer can declare it stalled. Whatever was never released comes back, pro rata, no matter who claims first.

SITE CLEARING AND FOUNDATION

BUSINESS MODEL

- KES 200 onboarding fee by M-Pesa, live today
- 1 to 1.5% of each milestone released
- A flat verification-visit fee, shared with the trustee
- A monthly plan for developers with several projects

WHAT WE ARE LOOKING FOR

- A licensed trust or e-money partner for settlement
- A production M-Pesa payroll
- Three developers and one diaspora SACCO to pilot
- Surveyors and valuers to act as paid trustees

The code: github.com/Talent-Index/datum

Open source. Foundry contracts, Next.js on Vercel, the evidence pipeline with its own perceptual hash, and a README that says what is deliberately left out and why.
